

# SAFE VACCINATION PRACTICES

**Wear a mask at all times.**  
Cover your mouth and nose with the mask and make sure there are no gaps.

**Practice social distancing.**  
Maintain 2 meters (6 feet) distance between yourself and others when at the vaccination clinic.

**Appointment-based vaccination services** are ideal so infection control procedures and social distancing can be enacted.

**Vulnerable patients** should visit the vaccination sites on dedicated days to avoid clinic traffic.
